**PROTECT  
YOUR  
NETWORK**

Specifically designed for HFC or FTTC network applications, the TII 210 & 212 protect personnel and customer equipment from lightning and power-induced surges...

## PROTECT YOUR NETWORK

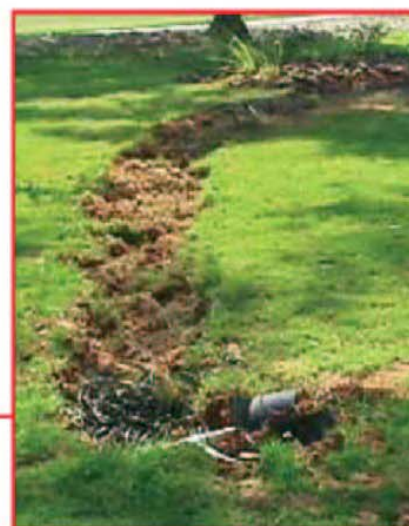

**SEE FOR YOURSELF THE IMPORTANCE OF SURGE PROTECTION.**

Today, personal safety and the protection of sensitive electronic equipment is more important than ever. TII has been in the forefront of providing advanced technology for safeguarding personnel and equipment from lightning and power induced surges since its inception in 1964.

Do not wait until it is too late to install the TII In-Line® Coaxial Lightning Surge Protectors in your network. Add protection to your network before an avoidable accident occurs as illustrated in these photos.

*Lightning struck a tree in a subscriber's yard.*

*The lightning caused a surge to be induced into an underground coaxial cable, causing a trench to be formed. The surge traveled on the cable towards the subscriber's home.*

*At the subscriber's home, the surge was suppressed by the TII 212 In-Line® Coaxial Surge Protector (circled). Thus, all residents in the home were safe and all equipment protected.*

*Use the contents of this kit to start protecting your network today.*
