CrossPATH 4
CrossPATH 3G
CrossPATH IIe

Kentrox[®] is a leading supplier of radio access solutions and Channel Service Units (CSUs) for wireless service providers, deploying over 100,000 products into wireless networks. Kentrox offers a variety of cell site aggregation solutions including compact T1 cross connects, advanced remote management, and IP and ATM migration for backhaul - all at an exceptional value.

Designed specifically for rapid network deployment in a radio access environment, Kentrox products are competitively priced and have a full set of features to support wireless networks, including:

- High-density, compact designs for minimal space requirements
- Unparalleled ease-of-use for quicker installations and low maintenance costs
- Industry-leading T1 performance monitoring and BERT diagnostics
- Data ports for e911
- Packet backhaul migration options

CrossPATH[®] 4 delivers multi-service cell site aggregation for the growth of existing networks and migration to next-generation packet networks. An integrated router with a web GUI delivers unparalleled ease-of-use and advanced remote management capabilities.

With 16 T1 ports in only 1RU, CrossPATH 3G provides the best port density at a substantially lower price than its competition. An integrated router with a web GUI delivers unparalleled ease-of-use and advanced remote management capabilities.

CrossPATH IIe integrates multiple radio interfaces and e911 locator messaging traffic into fewer T1s, reducing backhaul costs. Advanced in-band management allows remote monitoring of up to five units via a single DS0 link.

The best-selling DataSMART[®] MAX can be installed and configured in just a few minutes using the integrated front panel LCD (Liquid Crystal Display). M-PATH[™] and DataSMART MAX CSUs combine radio traffic and E-911 messaging onto a single T1 line for maximum efficiency.

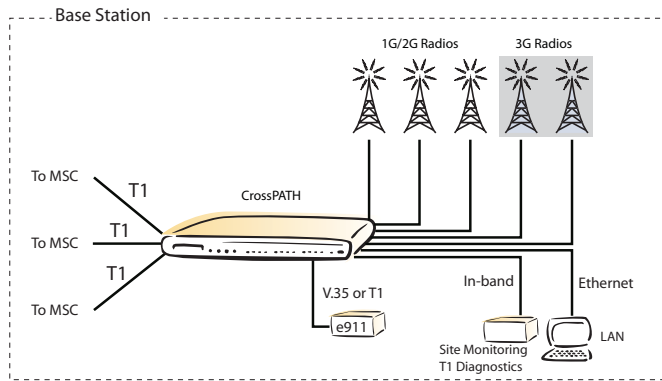

T-SMART[®] T1 Intelligent CSU provides in-service monitoring for early detection of developing problems.

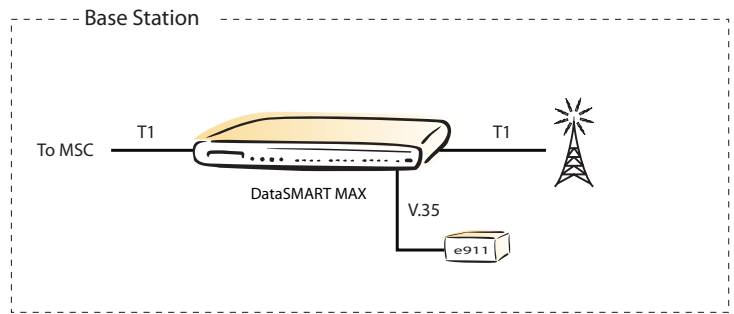

With exceptional reliability and plug-and-play installation, the T-SERV[®] II T1 CSU is an economical solution for T1 line termination and signal conditioning. Standalone and plug-in models are available for low- or high-density mounting options.

KENTROX
Quality Access

CrossPATH 4 and 3G support high-density base station growth and new services.

DataSMART MAX enables rapid deployment of E-911 in radio access networks.

Kentrox Wireless Carrier Solutions

Kentrox offers the most reliable, lowest operating costs, and easiest to install radio access products in the market today. Combining features to suit any cell site radio access network and a long history of exceptional performance, the Kentrox solutions are the best choice in the market. Contact your Kentrox representative for more information.
