

Plug & Play™ Systems

Plug & Play™ Systems for Data Centers and Storage Area Networks (SANs)

Corning Plug & Play™ systems create a fiber optic tip-to-tip solution for data centers and storage area networks consisting of housings, modules, panels, harnesses, trunks, and jumpers.

Plug & Play™ Systems

Features and Benefits

Universal wired modular system components

Enables moves, adds, and changes (MACs) without polarity concerns; provides a simple migration path between two-fiber and parallel optics applications

Corning® ClearCurve® OM3 and OM4 fiber offers enhanced bend performance

Allows tighter cable routing without negatively impacting system performance

100G-ready performance

Ensures product will meet the requirements of 100G Ethernet applications

Parallel optics tested to a maximum skew of 0.75 nanoseconds

Ensures operation in high-data-rate Ethernet and InfiniBand applications

100% round furcation legs

Eliminates preferential bend issues commonly associated with ribbon cables and furcation legs

MTP® PRO connectors on harnesses and jumpers

Allows for pinning and polarity changes in the field

Rack-Mountable Pretium™ Connector Housings

The rack-mountable Pretium™ connector housings (PCH) are available in 1U, 2U, and 4U sizes and mount into 19-in racks or cabinets. Combined with the modules, panels, harnesses, trunks, and jumpers, they provide a tip-to-tip solution for your fiber optic network.

Plug & Play™ Systems

Modules

Plug & Play™ modules provide the interface between the MTP® connector on the trunk and the LC jumpers that will connect directly to the electronics. The LC duplex adapters feature hinged VFL-compatible shutters that move up and out of the way when the connector is inserted. Specially designed indents in the shutters ensure that the end faces of the connectors are never touched. These shutters replace the standard dust caps that typically, once removed, are never replaced, exposing the interior end faces to dust particles and possible damage.

Plug & Play™ Systems

MTP® to LC/SC Harnesses

The 12-fiber Plug & Play™ module harness is designed to create a cross-connect point near the electronics by enabling port replication. This cross-connection is possible with duplex LC connectors to interface with the electronics and an MTP® PRO connector to connect into the back of a module. With port replication, your day-x after multiple MACs in front of the electronics looks the same as day one.

The 12-fiber Plug & Play trunk harnesses are designed to facilitate an interconnect point when the electronics are located in a separate area than the cross-connector patching field. This interconnection is possible with duplex LC connectors to interface with the electronics and an MTP PRO connector to connect into a trunk.

MTP PRO allows for a simple one-step, color-coded polarity change feature without removing the connector housing. The connector also provides the capability for field-friendly pinning configuration changes with safe handling of pins and easy color identification while maintaining product integrity.

Plug & Play™ Systems

Extender Trunks

Plug & Play™ systems extender trunks are used to distribute portions, or all, of the fibers in a Plug & Play MTP® trunk to other areas in the infrastructure. For example, a high-fiber-count trunk can be deployed from a main distribution area (MDA) to a zone distribution area (ZDA). Lower-fiber-count extender trunks can then be utilized to distribute fiber from the ZDA into cabinets.

MTP® Jumpers

MTP® jumpers allow for the seamless migration to higher data rates in the data center when used in conjunction with our MTP trunks. The jumpers are built with pinned or non-pinned 12-fiber MTP connectors. Pictured here are the most common applications for this type of jumper to make ordering easier. All the jumpers are plenum rated.

MTP jumpers have the same connector size and cable footprint as duplex LC jumpers used today. The density, airflow, and cable management of Plug & Play™ systems is preserved as you migrate to higher data rates.

MTP PRO allows for a simple one-step, color-coded polarity change feature without removing the connector housing. The connector also provides the capability for field friendly pinning configuration changes with safe handling of pins and easy color identification while maintaining product integrity.

Integrated Trunk Modules

Plug & Play™ integrated trunk modules (ITMs) combine the features of the Plug & Play modules with a 12-fiber trunk to provide the interface between the MTP® connectors on the trunk and the LC or SC duplex jumpers that will then connect directly into the electronics. The LC duplex adapters feature hinged VFL-compatible shutters that move up and out of the way when the connector is inserted. Specially designed indents in the shutters ensure that the end faces of the connectors are never touched. These shutters replace the standard dust caps that typically, once removed, are never replaced, allowing the interior end faces to become dirty and possibly damaged.

The ITM provides a quick-and-convenient method for deploying and/or redeploying optical connectivity. It is ideal for deployment from the ZDA to equipment cabinet(s).

Reverse Polarity Uniboot Duplex Jumpers

EDGE™ reverse polarity uniboot duplex jumpers allow for the quick-and-easy conversion from a TIA-568 A-B polarity to a TIA-568 A-A polarity without exposing the fibers or needing any tools. This jumper comes with a straight-through polarity from the factory, but you can convert it to a flipped jumper with no tools. This uniboot design allows one cable to carry both fibers, reducing jumper bulk when routing.

Features

Slim, round two-fiber interconnect cable.

Uniboot-style duplex connectors.

Improved handling in high-density applications.

Low-loss connectivity enables system design flexibility.

Enabled by bend-insensitive Corning® ClearCurve® multimode or Corning® SMF-28e® Ultra single-mode fibers.

Designed to withstand tight bends and challenging cable routes.

LC Uniboot Jumper Specifications

Connector	Connector Code	Typical Connector Attenuation (dB)	Return Loss (dB)
MM LC uniboot	79	0.10	≤ 26
SM LC UPC uniboot	78	0.25	≤ 55
SM LC APC uniboot	80	0.25	≤ 65
